

Frühlim

Excellent tip closure

- Suitable for growing white asparagus
- Ideal for cultivation in mini-tunnels
- High spear weight and uniform grades
- Early production
- Stable, vigorous foliage

Frühlím F1

Frühlím is a 100% male hybrid that is extremely suitable for producing white asparagus in a temperate climate. Frühlím combines early production with thick spears of good quality. The tightly closed tips make Frühlím ideal for cultivation in mini-tunnels or under other types of thermal plastic.

Cultivation

Frühlím grows best in well-drained sandy soil. In in-house research over a period of several years the best white asparagus results were obtained with a plant density of 3.5 - 4 plants per running metre and a planting depth of 16 - 20 cm. Frühlím's natural earliness makes it particularly suitable for measures for forcing extra-early crops or for obtaining early crops using thermal plastic or mini-tunnels. Frühlím continues to produce high-quality asparagus under those various forms of cover.

Product

Frühlím has a high production potential, a good quality and a good thickness. The product is white with tightly closed tips and is not, or virtually not, susceptible to hollow stems, snapping or stem rust. 75% of the product is in the 16-28 mm grade class.

The plant

Frühlím's very uniform foliage is dark, erect and vigorous. It is very resistant to foliage diseases and retains its green colour until late in autumn. These good foliage characteristics make Frühlím very suitable for organic cultivation, too.

The Limgroup varieties at a glance.

Seeds

All seed supplied by Limgroup is subjected to strict internal quality inspections to test germinating power and varietal purity. Before the seeds are supplied, they are inspected and tested again by Naktuinbouw, an independent inspection service regulated by the Dutch government.
