

Xenolim

**Very good quality
and uniform product**

- **100% anthocyanin free green asparagus**
- **Very high production potential**
- **Uniform sizes and high spear weight**
- **Excellent tip closure**

Xenolim F1

Xenolim is a 100% male and 100% anthocyanin free hybrid that is extremely suitable for anthocyanin-free green asparagus production in regions with a temperate climate. Xenolim combines medium early production with exceptionally high yields and a long, profitable production life.

Cultivation

Xenolim grows best on fertile, well-drained soils. Our own trials for anthocyanin-free green asparagus production conducted over a series of years showed that the best results were achieved with a planting density of 4 plants per linear metre with a planting depth of 15 - 20 cm. Xenolim is a 100% male hybrid, so it not only stands for a long and profitable production life, but it also produces no volunteer asparagus from seeds.

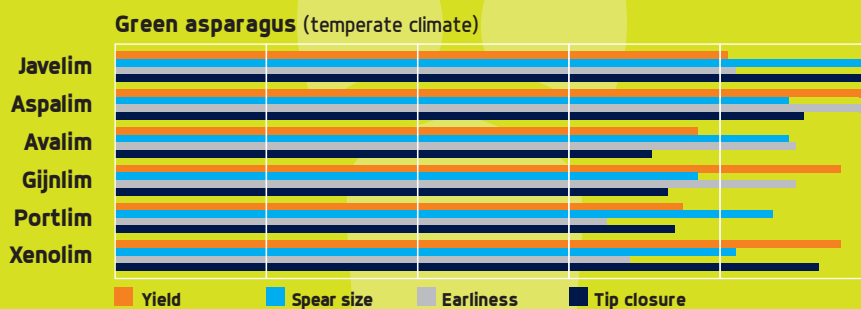

Product

Xenolim has a very high production potential, excellent quality and very good thickness. Even when harvested in warm conditions, the tip of Xenolim remains firmly closed. About 70% of production is in the commercially attractive 12 mm + class. Xenolim produces attractive, cylindrical, smooth spears.

The plant

The uniform foliage of Xenolim is tall and upright. Despite dying off naturally early, a good store of reserves is built up for the plant.

The Limgroup varieties at a glance

Seeds

All seed supplied by Limgroup is subjected to strict internal quality inspections to test germinating power and varietal purity. Before the seeds are supplied, they are inspected and tested again by Naktuinbouw, an independent inspection service regulated by the Dutch government.
