

# Aspalim

## Earliness and quality

- **Very high production potential**
- **Very tight tips**
- **Uniform grades and a high spear weight**
- **Starts producing very early**

# Aspalim F1

Aspalim is a 100% male hybrid that is extremely suitable for growing green asparagus in temperate climate zones. Aspalim starts producing very high yields very early.

## Cultivation

Aspalim will grow best in well-drained, vital soils. In multi-year research the best green asparagus results were obtained with a plant density of four plants per running metre and a planting depth of 15-22 cm. Aspalim starts producing asparagus with tight tips extremely early, and is therefore very suitable for advancing harvests.

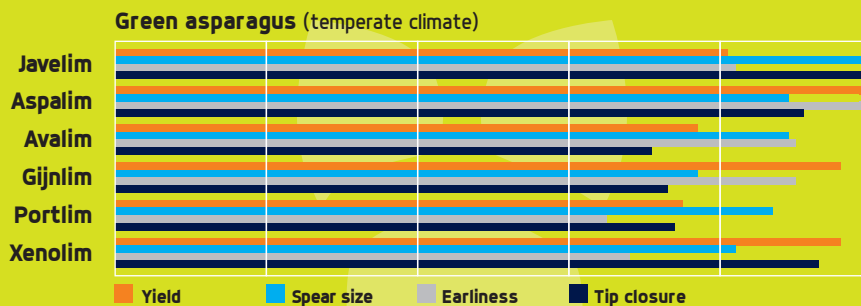

## Product

Aspalim has a very high production potential, an excellent quality and a very good spear thickness. Even under warm harvesting conditions, Aspalim has beautifully tight tips. It produces spears of an excellent thickness for many years. The cylindrical spears are also very smooth.

## The plant

Aspalim produces erect, open, uniform foliage that will remain green until well into autumn providing the right efforts are made to prevent Botrytis.

## Limgroup's varieties at a glance

## Seeds

All seed supplied by Limgroup is subjected to strict internal quality inspections to test germinating power and varietal purity. Before the seeds are supplied, they are inspected and tested again by Naktuinbouw, an independent inspection service regulated by the Dutch government.
