

Terralim

Medium early and high quality

- 100% male hybrid
- Extremely high yield potential
- High percentage of class I product
- Healthy, robust foliage

Terralim F1

Terralim is a 100% male hybrid that is ideal for white asparagus production in regions with a warm or Mediterranean climate. It combines early production with particularly high class 1 yields. Terralim is also suited to forced early cultivation.

Cultivation

Terralim grows best on fertile, well-drained soils. Our own extensive research has shown that the best results for white asparagus production can be achieved with a planting density of 5-6 plants per linear metre with a planting depth of 18-22 cm. On fertile soils not sensitive to drought or fields that are irrigated and/or where fertigation is present, a planting density of 6-8 plants per linear metre is possible. Thanks to its excellent tip closure, Terralim is ideally suited to extra forcing techniques such as plastic mulch and mini tunnels.

Product

Terralim has an extremely high production potential, excellent quality and a good thickness. The uniform product has a tightly closed tip and almost no susceptibility to pink discolouration and physiological rust. More than 75% of production is in grade class 16-24. Terralim has a good flavour.

The plant

Terralim has uniform, very upright foliage which has natural resistance to foliage diseases and is not susceptible to lodging. These good foliage traits therefore also make Terralim ideal for organic cultivation methods.

The Limgroup varieties at a glance

Seeds

All seed supplied by Limgroup is subjected to strict internal quality inspections to test germinating power and varietal purity. Before the seeds are supplied, they are inspected and tested again by Naktuinbouw, an independent inspection service regulated by the Dutch government.
