

Lunalim

Perfect quality, early in the season

- 100% male hybrid
- Very early with extremely high yield potential
- High spear weight and uniform size
- Perfect firmly closed tip

Lunalim F1

Lunalim is a 100% male hybrid that is ideal for green asparagus production in regions with a warm or Mediterranean climate. Lunalim combines very early production with high yields and excellent closed tips.

Cultivation

Lunalim grows best on fertile, well-drained soils. Our own trials for green asparagus production conducted over a series of years showed that the best results were achieved with a planting density of 25,000 – 32,000 plants per hectare with a planting depth of 15 – 20 cm. The highest planting density can be used on fields that can be irrigated or where drip fertigation is installed. Lunalim is a 100% male hybrid, so it not only stands for a long and profitable production life, but it also produces no seedlings.

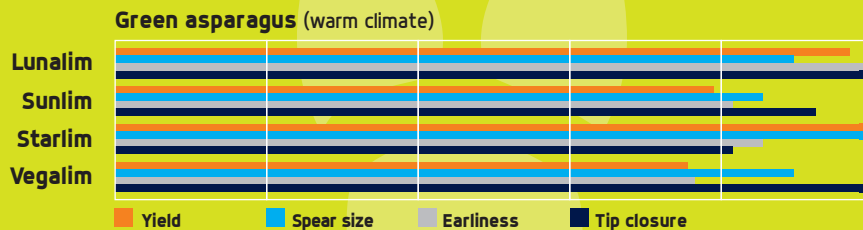

Product

Lunalim has a very high production potential, perfect quality and very good thickness. More than 80% of its uniform production is in diameter class 12 mm +. Even in warm or hot conditions, the tip of Lunalim remains firmly closed. Lunalim produces attractive, smooth spears.

The plant

Lunalim has uniform, very upright foliage and has good resistance to foliage diseases. As it forms no female berries, the foliage is hardly susceptible to lodging.

The Limgroup varieties at a glance

Seeds

All seed supplied by Limgroup is subjected to strict internal quality inspections to test germinating power and varietal purity. Before the seeds are supplied, they are inspected and tested by Naktuinbouw, an independent inspection service regulated by the Dutch government.
