

Portlim

**Green asparagus suitable
for second part of the season**

- **High production potential**
- **Uniform sizes and high spear weight**
- **Excellent tip closure**
- **Strong, robust plant traits**
- **Suitable for replantation**

Portlim F1

Portlim is a 100% male hybrid that is ideal for green asparagus production in regions with a temperate climate. Portlim combines medium early production with high yields and a long, profitable production life.

Cultivation

Portlim grows best on fertile, well-drained soils. Our own trials for green asparagus production conducted over a series of years showed that the best results were achieved with a planting density of 4 plants per linear metre with a planting depth of 15 - 20 cm. Portlim is a strong variety that can even produce an acceptable crop in more difficult conditions.

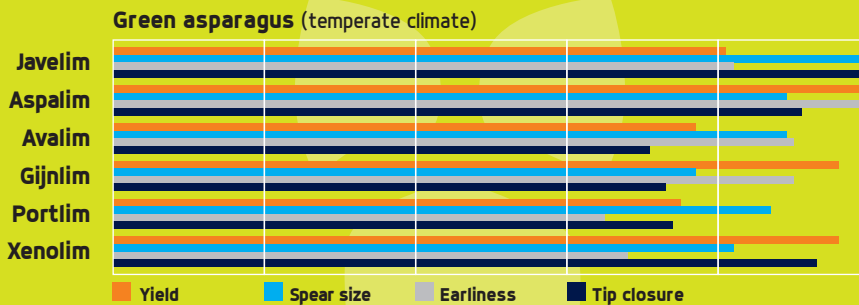

Product

Portlim has a high production potential, excellent quality and very good thickness. Even when harvested in warm or hot conditions, the tip of Portlim remains firmly closed. The variety has outstanding spear thickness which remains more or less constant during its production life. Portlim produces attractive, cylindrical, smooth spears.

The plant

Portlim has uniform, upright foliage with an open structure. The foliage is hardly susceptible to lodging and has good resistance to foliage diseases.

The Limgroup varieties at a glance

Seeds

All seed supplied by Limgroup is subjected to strict internal quality inspections to test germinating power and varietal purity. Before the seeds are supplied, they are inspected and tested again by Naktuinbouw, an independent inspection service regulated by the Dutch government.
