

# Grolim

Top variety for the main season

- **High yield potential**
- **Suitable for high plant densities**
- **Excellent harvest efficiency**
- **Reliable quality**
- **Suitable for forced production**

# Grolim F1

# Limgroup®

Grolim is a 100% male hybrid that is suitable for cultivation of white asparagus in both temperate climate zones and in climates similar to Southern Europe. Grolim is ideal as a “high yield variety”. Its exceptionally high stem weight plays an important role in reducing labour costs. This variety gives above average production.

## Cultivation

Grolim grows best on fertile, well drained soils. Good results can be achieved on both sandy and clay soils. Fields with high groundwater levels or that are susceptible to flooding are less suitable. Grolim performs optimally under warm and fertile conditions, giving high quality and high yield. Grolim is ideal for use with black/white sheeting or sheeting used to force early production. Many years of practical experience have shown that the best results are achieved with a planting density of 5 - 8 plants per linear metre. With Grolim high planting densities do not usually result in thin stems; generally the grades will only become more uniform and the yield will improve in quality and quantity. The recommended planting depth is 18 - 20 cm.

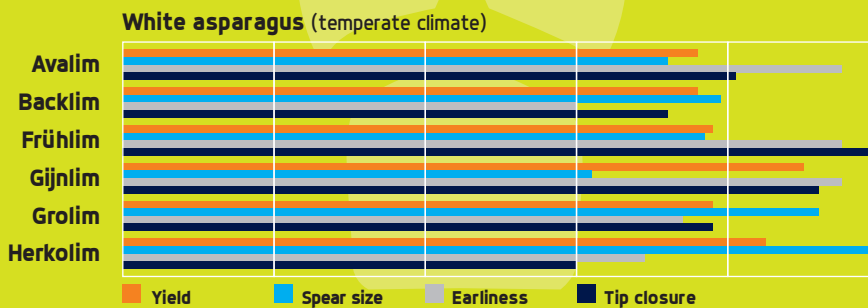

## Product

More than 80% of production is above grade class 16 mm. Grolim has very little pink discolouration, grooves or bent stems, and with correct sheeting management it has a fine closed tip.

## The plant

The open, erect plant structure means diseases stand little chance. These qualities also make Grolim suitable for organic cultivation methods.

## The Limgroup varieties at a glance

## Seeds

All seed supplied by Limgroup is subjected to strict internal quality inspections to test germinating power and varietal purity. Before the seeds are supplied, they are inspected and tested again by Naktuinbouw, an independent inspection service regulated by the Dutch government.
